

⚡ **Core Differentiator:** TellMAX.AI is NOT another generic AI chatbot or passive Q&A assistant sitting on top of your network — MAX has full operational context and active API control across your entire IT & OT infrastructure to execute real-time closed-loop remediation.

1. STRATEGIC PROBLEM & HEADLINE HOOK

Cisco Partners and enterprise IT teams are drowning in alert fatigue. Unplanned downtime costs Global 2000 organizations **\$600B annually**. Critical infrastructure environments generate thousands of daily alerts across fragmented IT and OT systems, stretching MTTR from 45 to 90 minutes. **TellMAX.AI solves this by acting as the digital clone of the network engineer — always on site, always available.** MAX bridges the human expertise gap, eliminating tool sprawl by unifying Splunk, Meraki, Cisco Spaces, Webex, and Catalyst into an active execution engine.

2. THREE CORE BREAKTHROUGHS

- **1. The Brain of Splunk:** Acts as Splunk's "frontal lobe" — translating raw SPL telemetry into human dialogue, cross-referencing IT/OT context with technical PDFs via RAG, and making autonomous decisions in <5 seconds.
- **2. Partner Superpowers & MTTR Reduction:** Cuts L0/L1 incident resolution time by up to **85%**. Hands-free voice (via Cisco CUBE + Webex Calling) enables engineers to execute cable tests and port bounces on the move.
- **3. Sovereign Architecture (UCS AI Pods):** Migration path to run 100% on-premise on Cisco UCS AI Pods — zero data leakage for regulated enterprises.

3. MARKET OPPORTUNITY (TAM / SAM / SOM)

TAM: MANUFACTURING (\$22K/MIN)

\$38.2B

Global AIOps by 2032 (30.5% CAGR).
Factory downtime costs \$22,000/min
(\$1.3M+/hr).

SAM (SERVICEABLE MARKET)

~\$1.2B

~15,000 Cisco MSP contracts in
EMEAR/Americas (Manufacturing,
Healthcare, Finance).

SOM (CISCO DRAG & VALUE)

+\$150M

UCS AI Pod hardware drag
(\$80k-\$150k/node) + 25-40% MSP contract
expansion.

4. CISCO TECH ALIGNMENT & VERTICAL FINANCIAL IMPACT

TellMAX.AI directly embodies Cisco's directives to **"reduce tool sprawl"** and deliver **"resilient, observable outcomes customers can actually run their business on."** It aligns with the **Cisco 360 Partner Program** by closing the expertise gap so customers fully utilize their Cisco stack.

TARGET VERTICAL	INDUSTRY ECONOMIC IMPACT	CISCO ARCHITECTURE DRAG & TECH ALIGNMENT
1. Manufacturing & Industrial	\$22,000 / minute downtime cost (\$1.3M+/hr) in lost SCADA/PLC production.	Splunk OT Security + Catalyst 9000 Industrial Ethernet (IE) + Meraki MT Sensors + DNA Center APIs.
2. Healthcare & Life Sciences	\$8,600 - \$15,000 / minute outage cost across 15-20 medical IoT devices per bed.	Meraki MR (Wi-Fi 6E/7 Clinical Wireless APIs) + Meraki MT + Cisco Spaces Asset Tracking + Splunk ITSI.
3. Finance & Banking	\$5.6M / hour downtime cost + EU DORA penalties (up to 2% annual global revenue).	Splunk Enterprise Security + Catalyst Zero Trust Microsegmentation + ThousandEyes + UCS AI Pods.
Live Pilot Proof Point	Cap Vermell Grand Hotel: 5-star luxury resort (Mallorca) active in live production (HVAC & NetOps).	Splunk HEC + Meraki Dashboard API + BACnet/IP BMS + Webex / ToIP Ext 1999 Voice.

Cisco Q4 FY2026 Financial Backing (Aug 12, 2026 Earnings):

- **Mark Patterson (CFO):** Large on-premise enterprise deals drove Cisco's **14% security revenue growth** in Q4.
- **Chuck Robbins (CEO):** Customers choosing on-premise AI is a highly favorable outcome for Cisco's hardware & compute stack.

5. TWO-TRACK COMMERCIAL & TECHNICAL ROADMAP

GTM Roadmap: Active Production Pilot (Cap Vermell)  → Q4'26 Manufacturing & Healthcare 2 Beta Pilots Ready to Launch → Q1'27 GA v1.0 → Q2'27 Splunkbase & Cisco DevNet Listing.

Tech Roadmap: Phase 1 (Webex/Telegram/Splunk HEC) → Phase 2 (Cisco CUBE Ext. 1999 Voice) → Phase 3 (Sovereign UCS AI Pods Package).
